

Course venue

We are proud to host the next course on Tropical Paediatrics and Global Child Health at the castle “**Schloss Rauischholzhausen**” (<http://schloss.faber-management.de/rauschholzhausen>), a historical site liaising with the University of Gießen, as a unique and yet reasonably priced venue for our course.

The castle offers numerous seminar rooms of different sizes and a main lecture hall, which serves well our approach to teach and learn in small interactive group sessions.

Participants will be accommodated in single or double bedrooms from Sunday night until Friday morning with all meals included thus cutting down on time spent for transport and enhancing the networking experience.

The beautiful surroundings of the castle invite for relaxing walks or some morning work-out.

German Society of Tropical
Paediatrics and International
Child Health

The GTP has been founded in 1982 and has been known as ATP (German Association of Tropical Paediatrics) until 2014 before undergoing a name change to better reflect its focus on international child health as a clinical and scientific society. The GTP is a subdivision of the German Society for Child and Adolescent Health (Deutsche Gesellschaft für Kinder- und Jugendmedizin e. V.) and has been registered as a charity organization since 2003.

It aims at a close cooperation with national and international organizations dealing with issues in the field of international child and adolescent health in low and middle income countries. The society is engaged in research, teaching and clinical projects.

Registration

Fees (including 300 € for catering & accommodation)

	GTP-Member	Non-GTP-Member
Early bird	700 €	800 €
Regular Fee	800 €	900 €
Early bird registration deadline: 30.11.2015

Intensive Course on Tropical Paediatrics and Global Child Health

1st-5th Feb. 2016
in Gießen, Germany

www.tropenpaediatric.de

Target Group

This intensive course addresses medical personnel of all specialties interested in international child health with focus on resource limited countries.

We prepare participants to perform in different social, cultural and political contexts and to deliver adequate care in resource limited settings.

We give an update on recent global data regarding international child health as well as on typical paediatric diseases in the tropics and subtropics.

The theoretical knowledge acquired during the lectures is applied in practical group work. Furthermore political challenges in international developmental aid are addressed.

"The course is very relevant. Knowing cultural differences is as important as knowing disease spectrum."

"The best group work sessions I have attended so far. They were all held on a very high level. Thank you!"

Lecturers and Course Content

The entire course is taught by international medical professionals with working experience in a variety of international and national projects and countries.

Theoretical content is underlined by specific and personal practical examples from the field.

We organized the seminars and accommodation to be allocated in the same venue for more interaction and experience exchange.

Course language: English

"I learned so much from our overseas colleagues"

Preliminary Course Schedule

Monday

- Global Child Health
- Family medicine in resource limited settings
- Intercultural aspects of medical collaboration
- Global players in International Health
- Psychosocial aspects of International Health
